

## AET Commitment to Net-Zero GHG Emissions by 2050

AET's commitment is to achieve net-zero greenhouse gas (GHG) emissions by 2050 in line with our Vision and Mission.

The commitment is informed by:

- AET's business context
- Relevant national policies
- Applicable international policies, frameworks and standards
- Climate science

In line with the above, we will continue to pursue business growth opportunities in the low-carbon economy and take actions to reduce our Scope 1 & 2 GHG emissions through decarbonisation levers such as:

- Energy efficiency measures
- GHG abatement technologies
- Fleet renewal with zero & near-zero emission vessels
- Use of renewable energy and low-carbon fuels

We will explore collaborative efforts with our suppliers and customers to reduce our Scope 3 emissions.

Carbon offsets will only be used for the remaining hard-to-abate emissions as recognised and allowed for by relevant international standards. For details of our pathway to net-zero see our website.

All employees are required to align all business activities with the approach and targets set by AET to achieve net-zero GHG emissions by 2050.

The commitment is approved by the Board of Directors, and its implementation is overseen by the Executive Leadership Team.
